Machine appearance

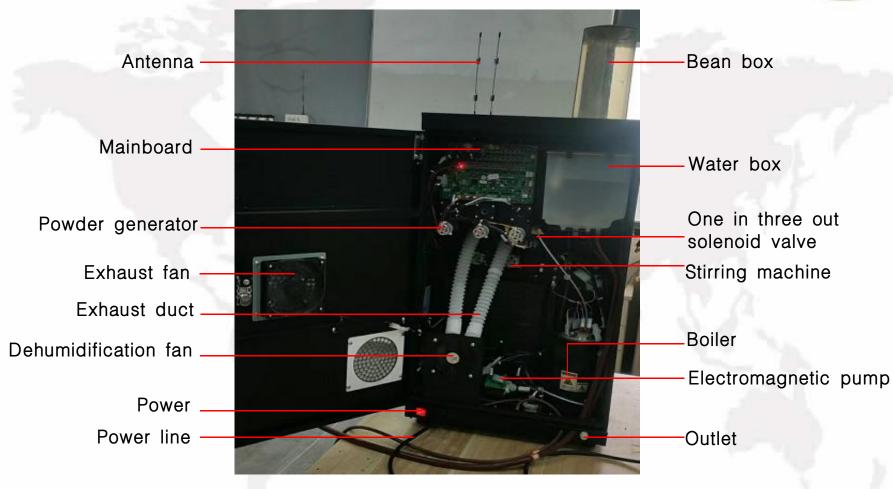

Machine appearance

Machine appearance

Installation requirements

Before installation, please again confirm security considerations and installation conditions, and strictly follow the steps below to install equipments as shown:

- 1. Put the machine on the bottom cabinet and put pure water into it
- 2. Cut off the cable tie of the power cable and connect the power cable to a grounded power socket.
- 3. If extension cable is needed, professional electrician must carry out operation (grounding wire is essential)
- 4. Power on the device, turn on the power switch (buzzer), and confirm that the device is working.

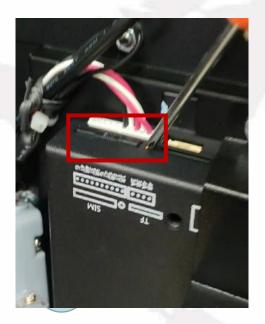

Door opening

- 1. Using the corresponding key in the lock, key anticlockwise
- 2. Press the switch under the lock handle to unlock the lock handle; Counterclockwise rotation lock handle, pull open cupboard door note: hold the handle to turn right at the same time, pull open cupboard door;

Card inserting

1

2

3

- 1. The door open to turn off equipment, in addition to prepare a card must be calories as shown in figure 2 (mobile unicom, telecom)
- 2. Find the card slot, see figure 1 (3) to open the card slot flow card mount will be prepared

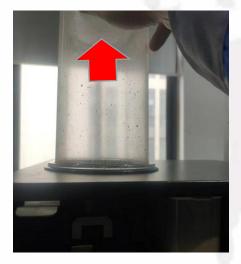

Coffee beans adding

push the bean box gate into the lock bean box outlet

Bean box Push forward in the direction of the arrow to take out the bean box

Coffee beans adding

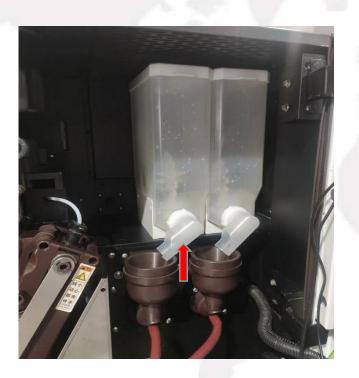

- 1.pull box on the beans beans warehouse gate
- 2. put the prepared funnel in the mouth, pour the coffee beans
- 3.Lock the beanbox gate, put the beanbox into the device and pull out the beanbox gate. When done, test a drink

Melting powder adding

Aim your hand at the nozzle

Rotate the nozzle so that it faces 12 o 'clock

Melting powder adding

Lift the front of the material box so that the red circle is inserted and removed from the machine

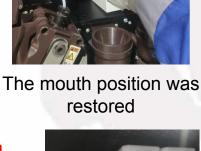

charging

Put back in the box

Suggestion: After adding the powder, the powder type under the label on the top of the powder box can be avoided to make up the wrong material

Eequipment daily maintenance instructions

Find the trash box

Pull out the waste box

Just dump the coffee grounds back into the waste container and close the wicket

Eequipment daily maintenance instructions

Mixing mechanism cleaning

1. First remove the discharge port to facilitate the following operations; 2. Gently pull up fingers inserted into the mixing bowl, release after open;

After the cover is removed, hold the mixing bowl with your hand and gently lift and rotate counterclockwise to remove it

After the bowl cover is removed, hold the bowl with your hand and gently lift it up and rotate it counterclockwise to remove it

Eequipment daily maintenance instructions

Remove the waste water box and the bottom baffle of the waste water box

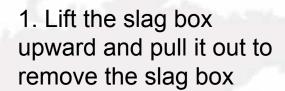

- 1, pull out waste water box
- 2, find the upper right corner of the fixed waste water box of the baffle lock hook t3, push the lock in the direction shown by the arrow, falls off waste water box under the baffle, take out the waste water box under the flap

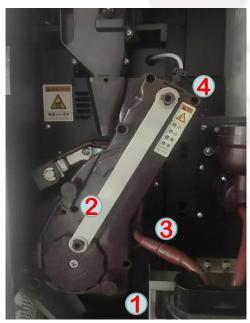

Ejector removed

- 2, see stiff, first turn on the position and special brew teflon tube joint is removed by this counterclockwise to loosen, then pull the silicone tube
- 3. Loosen the screws at places 1 and 2 by turning counterclockwise as shown in the figure
- 4, according to the graphic level to pull out

Installing of the bubbler

- 1. During installation, No. 6 corresponds to No. 8 hole, No. 7 corresponds to No. 10 hole, and No. 11 corresponds to No. 12 hole
- 2. After alignment with the above hole position, push the bubbler horizontally to the end, and then rotate clockwise to tighten the No. 1 and No. 2 shaft caps (the installation rotation direction is opposite to the direction when removing the bubbler).
- 3. Connecting positions 4 Teflon tube connectors and 3 silicone tubes
- 4. Install the slag stopper, the lower baffle of the waste water box and the waste water box, and test a cup of drink after completion

Turn on the machine to exhaust gas

After the preparation work is done, insert the power plug into the three-wire grounding socket, turn on the power switch on the back of the machine, and enter the system startup interface on the screen. If the machine is powered on for the first time, it must be vented. After the machine is powered on, it will be necessary to exhaust. If the machine is powered on for the first time, click here to exhaust the boiler

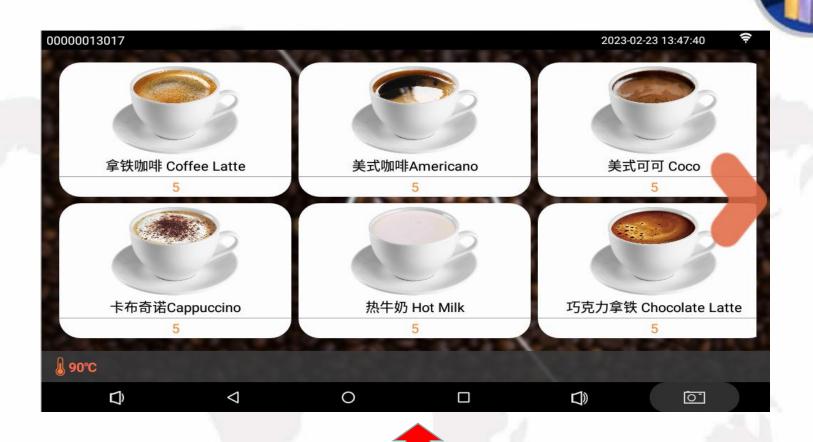

After exhausting the gas, it will directly enter the eller state and enter the use state for about 5 seconds. After entering the use state, if the Internet is connected, the wireless network area network will be displayed if it is a wireless network, such as 3G4G network will be displayed on the traffic card

If you need to buy goods, first select the type of goods, and then select the payment method to purchase

entry mode choice

In standby mode, a password box will pop up if you click the number in the upper left corner of the screen several times. Enter the password (352356) and click OK to enter the "Function Operation menu".

equipment number

The device ID number of the upper computer is the unique identification number of the host, which is the unique address of the background of the machine. This is used for changing the device number. The password is 352356

Machine configuration

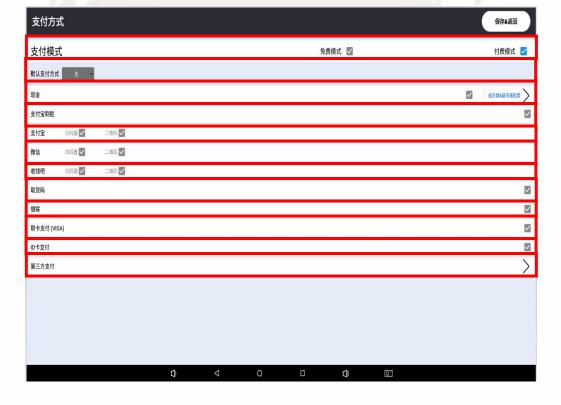

When you meet the machine prohibition of use, the password is 352356

mode of payment

Payment method, this is used to set the collection, the password is 352356, change you need to contact the administrator

Coffee name, recipe, price setting

On the beverage setting screen, you can set the name, price, formula, and number of drinks. Number of drinks: drink 1 to start in order to enable, customers are free to set himself. Name and price of the drinks: name and price can be directly changes, pay attention to the cash price multiples of at least 0.5 yuan and 0.5, pay treasure and WeChat at least 0.01 yuan.

import the picture first according to the requirements of the picture and into the U disk import

When the machine is in trouble, the fault problem code will appear here. Generally, the problem will disappear after the machine restarts. If you want to know the specific problem, click restart the device, which is for the specific problem

sales statistics

Enter the sales data statistics interface, where you can view the total sales volume and total sales amount, as well as real-time transactions, and the sales data can be cleared. If you need daily or monthly sales information, you can view and export it in the background.

import and export

The sales interface background picture, screen saver picture, grinding waiting video, coffee name picture can be replaced, import and export into the USB disk, according to the import and export instructions

Other Settings

This function is optional. It mainly plays advertisements. Contact the administrator if you need to use it

Coffee test

Enter the coffee test interface, you can view and test the status of the machine. Usually used are exhaust, cleaning and grinding bean device, cleaning and stirring system, beverage testing, boiler temperature, ask the current state, synchronization parameter reset, other functions as far as possible do not use.

Problem analysis sheet for coffee machine			MA	
sequence	Mass anomaly	Cause analysis	Treatment scheme	remarks
		— Maybe the coffee mix isn't right	1. Adjust your drink mix	
1	No drink	二、The outlet or powder line may be blocked	1. Water or powder pipes should be cleaned timely or regularly to ensure the normal discharge of beverages.	
2			2. Replace the pressure relief valve where the beans are grinding	
		—. The grinding motor may jam beans or other foreign bodies	1. Check whether there are beans or other foreign bodies stuck at the grinding motor and deal with them in time.	
	Grinding time out	The bean bin card may be closed by mistake, or the bean box gate may not be opened when the bean is added	1. Check whether the bean bin card board is opened.	
2		■ The grinding motor cable may fall off	1. Check all the connections of the grinding bean motor to see if there are any falling off or broken.	
		四、No power supply for the grinding board	 Check whether there is 220V voltage output when grinding beans on the grinding bean driving board. No need to replace the grinding bean driving board 	
			2. Replace the grinding motor	
		—. Restart the machine to check whether the falling powder electromagnet works	1. Check whether the wire is loose. 2. Replace the falling powder electromagnet	1 6
3	Falling powder fault	Check whether there is coffee powder in the falling powder assembly	Clean the coffee powder inside the powder module	1
		三、Check falling powder microswitch in falling powder assembly	1. Replace the micro switch	

4	Brewing timeout	the bubbler may be stuck powder, parts dislocation	1. check whether the bubbler card powder, if the powder directly clean, if dislocation need to disassemble the bubbler and reassemble.	
		, there may be a problem with the brewing motor	1. Check the brewing motor. There are two microswitches on the brewing motor. Some microswitches may move up, so you need to fold them down with tools.	
		≡ . maybe the brewing motor is broken	1. Replace the brewing motor	
		四、No power supply for the grinding board	1. Test whether there is 220V voltage output when grinding beans on the grinding bean driving board, without replacing the grinding bean driving board	51
		五、the powder is too much to fall off	1. adjust the powder electromagnet storage	part .
		The coffee beans are ground so finely that the fine grounds cannot be removed	1. Adjust the thickness of ground beans	
5	Shift timeout	— , test the nozzle to see whether the moving mouth moves or not	1. the nozzle does not move to replace the nozzle motor	Test whether 12V direct current is available
		, test the nozzle to see whether the moving mouth is moving in the right place	2. cleaning nozzle	Check the thread for looseness
		Detect whether the nozzle micro switch is responsive	3. replace the nozzle micro switch	
6	Temperature sensor fault	Check whether the cable of the sensor is loose	Reinsert the cable end of the temperature sensor	
		□. Boiler temperature test	1. the boiler temperature is too high, turn off the machine boiler heating wire unplug a root, turn on the exhaust until the boiler temperature to room temperature, turn off the machine and plug in the heating wire, turn on 2check whether the end line of the driving plate is loose	¥)
			3. Replace the temperature sensor	

	The data card may be overdue	1. Let the customer recharge the data card for the data card.		
		the flow card may be damaged	1. replace the flow card.	
7	The machine has no network	= . industrial computer may not read the network	1. the signal is too weak	A 1004
		四、The antenna may not be plugged in properly	Check whether the network cable and antenna are loose	
		五、ndustrial computer card slot may have problems	1. replace the industrial computer	67
		network, signal problems	Check whether the network is normal and the signal is smooth	18
8	Alipay and wechat payments are not allowed	there may be no background binding	1. the background binding, bind the machine ID to the background management.	
	- T-	三、there may be no binding of payee and public account information	1. Bind the information of the payee and provide various information of the payee according to the sales process.	
9		—, he machine may be out of power at the power source	Check whether the machine has power at the power connection.	
	The machine is out of power	The two ends of the power cable may be loose	1. Check whether the inner cable head of the power box is loose. 2. Check whether the filter wire head is loose	1/2
		三、the switching power box may be damaged	Measure whether the power box has voltage output, without replacing the corresponding power box	
10	The sheet metal of the machine has static	—, whether the machine is grounded	1. Check whether there is three-phase electricity in the machine socket. If there is no need to connect the ground wire behind the machine.	7)
	electricity	, the machine may leak electricity	1. check whether the machine inside the wire head loose resulting in machine leakage.	

11	Flowmeter failure	—, detect the flow meter inlet is blocked by stains	1. Dredge the flow meter. Or replace	First check whether the flowmeter wire head is loose
			2. Test whether the solenoid valve is normal	
			3. Test whether the booster pump is normal	
			4. Replace the driving plate	
	Unheated boiler	—, the temperature switch may trip.	1. check whether the temperature switch trip, jump directly on the temperature switch button down	51.1
12		, the temperature sensor may be bad	1. Replacement	Check that the heating line is properly inserted
12		三、grinding bean drive plate does not power supply	1. Test whether there is 220V voltage output when grinding beans on the grinding bean driving board, without replacing the grinding bean driving board	
	No sugar. No powder	—. Check whether sugar or powder is caked	1. Clean the material box and replace it with new powder	
13		check whether the sugar box powder box is installed	2. Reinstall the sugar cartridge	
20		三、check whether the motor power supply is 24V power supply	3. Check whether 24V voltage is output at the 24V low voltage driving plate of the switching power box. If not replace it	Pay attention to check whether the material box motor reverses
14	The tank cannot contain the water level	the micro switch does not respond	1. check whether the micro switch is bad, bad need to be replaced	* /
14		the water level floating ball may float problems	1. The water level float needs to be cleaned or replaced	

Content is constantly updated

15	The touch screen jumps	The machine may not be connected to a ground wire	1 1 1 1 1 connect the machine to a ground wire	
	randomly	_, the screen may not be connected to the ground wire	1, connect theindustrial compiuter to a ground wire	
16	Tank pumping overtime	Check the bucket for water	1. Replace the purified water	
		Check whether the pumping pump is pumped	2. Replace the pump	First test whether the pump is energized (24V)
	Full waste drum	check the waste water bucket waste water	1. Clean the waste water bucket	1
17		check the waste water float has not fallen or not	2. Clean up the float	and the same
